

# Eat, Love & Robots Challenge

the 20,000€  
student contest  
for food manipulation

Dexterity is one of the great challenges in robotics and one industrial applications where this ability is in high need is in food preparation in kitchens. Robots cannot yet match the elegance and precision with which chefs handle foods of all types - mushrooms, pineapple, meat slices,...

Can you come up with the new concept that will lead to a technology that can pick and place all types of ingredients?
