

# Robots + Food = X

## Remy Robotics business ideas Challenge

Robots have the potential to transform food preparation and cooking, however, real commercial applications have yet to break through, mainly because robots have yet to achieve the versatility needed to manipulate (“pick and place”) diverse ingredients.

This begs the question: has the food industry been focusing on the best commercial opportunities for the current robotics state-of-the-art?

# Robots + Food = X

Identify a real-life food industry use case for robots and submit your pitch explaining why it is the best and most commercially “ready” use of robotics!
